training data : raw text

span a broad range of domains, genres, languages

Web: Google Search Index 100 PB

Wal/Mart 2.5 PB / hour

Representation:

Representation. Despite the richness of web data, it has been noted in Bender et al, 2021 that:

- Despite the size, large-scale data still has **uneven representation** over the population.
- Internet data overrepresents younger users from developed countries.
- GPT-2's training data is based on Reddit, which according to Pew Internet Research's 2016 survey, 67% of Reddit users in the US are men, 64% between ages 18 and 29.
- 8.8-15% of Wikipedians are female.
- Harassment on Internet could turn away certain people (trans, queer, neurodivergent people).
- Filtering "bad words" could further marginalize certain populations (e.g., LGBT+).

Takeaway: it is crucial to understand and document the composition of the datasets used to train large language models.

WebText - 40 GB text - GPT-2

OpenWebText - 38 GB

Colossal Clean Crawled Corpus - 806 GB text (156 billion tokens)

- T5

Component	Raw Size	Weight	Epochs	Effective Size	Mean Document Size
Pile-CC	227.12 GiB	18.11%	1.0	227.12 GiB	4.33 KiB
